Overview

PCQC offloads routine post-close QC across the closing package and origination file. AI automates repeatable checks and routes low-confidence findings to experienced Snapdocs reviewers, who return actionable results. Your team can focus on validating issues and coordinating corrections, with documents indexed for investor delivery.

AI handles routine checks. Our experts guide exception resolution

PCQC reduces page-by-page review and gives your team more time to resolve issues, keep files organized, and move loans forward.

✓ Investor-grade collateral

Check execution and key loan data across most loan types to catch missing pages, signatures, dates, seals, and discrepancies before delivery.

Benefit

- Support stronger investor ratings and pricing
- Reduce investor stipulations on delivered loans

✓ Automated workflows & exception handling

AI automates routine checks and classifies documents into mapped eFolders, routing low-confidence findings to experts.

Benefit

- Increase team capacity without adding headcount or overtime
- Reduce manual review time and rework

✓ Clear & trustworthy visibility

Sync QC statuses and summary reports to the LOS so teams can track review progress and readiness through investor delivery.

Benefit

- Resolve issues faster with clear, actionable findings
- Gain visibility into error trends data

How it Works

PCQC checks and organizes the full file before investor delivery, routing low-confidence findings to experts.

Upload

Upload signed closing and origination documents to trigger PCQC review.

Deliver

Documents are indexed to eFolders and QC status syncs to the LOS.

Review

AI automates repeatable checks and experts review low-confidence findings.

Resolve

Your team validates issues and coordinates corrections using expert findings.

Ask us to model the impact on review time, sale cycle, and secondary-market execution.

*Reported results vary by loan mix and workflow. PCQC supports lender operations; lender and investor requirements still apply.
